✳ COURSES

2022 **The Rolling Scopes**
JavaScript / Front-end Course · RS School (RU)

2023 **The Rolling Scopes**
React Course · RS School (EN)

👤 ABOUT ME

Hello! My name is Aleksandr, and I'm a **Front-end Developer** with experience in teaching physics and system administration.

As a teacher, I have developed strong communication skills, reinforced my resilience to stress, and honed my ability to manage time effectively.

With seven years of experience in system administration, I possess excellent knowledge of computer hardware and network configuration. My technical background provides me with a solid foundation for working in the field of web development.

Despite lacking practical experience, I created a website for the organization where I worked. To enhance my skills, I embarked on a learning journey at RS School. Here, I acquired skills in developing modern, responsive web applications, learned how to collaborate effectively on team projects in various roles, conduct code reviews and refactoring, and present completed work.

I am currently seeking full-time employment where I can apply my knowledge and skills to continually improve and innovate.
